ABDUL-SAMAD OWOSENI

Lagos, Nigeria · 09161644922 · abdussamadowoseni28@gmail.com · linkedin.com/in/abdul-samad-owoseni

Data Analytics · Data Engineering · Python · SQL · ETL/ELT Pipelines · Tableau

PROFESSIONAL SUMMARY

Data Science student at the University of Lagos with hands-on experience in Python, data analytics, and machine learning fundamentals. My practical skills have been built through self-learning, community programs including the Mentor To Job Bootcamp and Data Science Nigeria (DSN), and real-world freelance projects. I have a growing interest in artificial intelligence, automation, and emerging AI tools, and I enjoy working on innovative, problem-solving projects. I am looking for an internship where I can contribute to AI-focused work, collaborate with a technical team, and keep growing in a fast-paced environment.

EXPERIENCE

Data Coordinator / Analyst | *Elevvo Tech* | 2024 – 2025

- Designed and deployed an end-to-end ELT pipeline using Python and PostgreSQL to ingest, clean, and transform multi-source datasets, reducing manual data prep time by ~40%.
- Built interactive KPI dashboards in Tableau and Excel tracking sales performance, customer behavior, and operational metrics across departments.
- Wrote optimized SQL queries (PostgreSQL & MySQL) for reporting on sales trends, product performance, and customer segmentation, improving reporting efficiency for stakeholders.
- Automated recurring data wrangling workflows using Pandas and NumPy, enabling faster turnaround on monthly business intelligence reports.
- Maintained data integrity across 5+ reporting datasets by implementing validation checks and transformation logic via Python scripts.

Data Analyst (Freelance) | *Independent Clients* | 2024 – Present

- Developed an Employee Performance Dashboard by building a SQL-to-Excel reporting pipeline that surfaced productivity KPIs and workforce trends for management decision-making.
- Cleaned, standardized, and modelled raw employee records using Power Query and SQL ETL workflows, enabling reliable trend analysis across quarterly performance cycles.
- Delivered visual BI reports that directly informed staffing and resource allocation strategies for clients.

PROJECTS

Retail Sales Data Pipeline · *Python · PostgreSQL · SQL ETL · Pandas* | 2025

- Built a modular ETL pipeline that extracts raw CSV sales data, applies transformation logic (deduplication, type casting, aggregation), and loads cleaned data into a PostgreSQL database.
- Parameterized the pipeline for reusability across multiple product categories and date ranges.
- Created automated summary reports from the pipeline output using Pandas, reducing manual analysis time by ~60%.

Sales Forecasting Model · *Python · Prophet · Pandas · Matplotlib* | 2025

- Developed a time-series forecasting model using Facebook Prophet to predict 90-day sales trends from historical transaction data.
- Improved forecast accuracy by 15% over manual baseline estimates through feature engineering and hyperparameter tuning.
- Visualized forecast outputs and confidence intervals with Matplotlib for clear stakeholder communication.

E-Commerce Analytics Dashboard · *Tableau · SQL · Excel* | 2024

- Designed a multi-page Tableau dashboard tracking revenue, customer acquisition, and product-level KPIs, enabling real-time business monitoring.
- Integrated data from 3 sources (CRM, transactions, inventory) using SQL joins and prepared a clean data model for Tableau consumption.

- Dashboard adopted by client for weekly executive reporting.

Data Quality Audit Tool (To Build) · *Python · Great Expectations · SQL* | 2025 – Ongoing

- Building a lightweight data profiling and validation tool using Python and Great Expectations to automatically flag null rates, schema drift, and outliers in pipeline inputs.
- Designed to run as a pre-ingestion check before any ETL load, ensuring downstream data reliability.

EDUCATION

B.Sc. Applied Science — Data Science Major

University of Lagos (UNILAG) · Expected Graduation: 2028

- Relevant coursework: Data Structures & Algorithms, Database Systems, Statistical Modelling, Business Intelligence

TECHNICAL SKILLS

Languages & Query: Python (Pandas, NumPy, Matplotlib, Seaborn, Prophet), SQL (Advanced)
Data Engineering: ETL/ELT Pipeline Design, PostgreSQL, MySQL, Power Query, SQL-based data modelling
Data Visualization: Tableau, Power BI, Excel Dashboards, Matplotlib, Seaborn
Analytics & Modelling: Forecasting, KPI Design, Business Intelligence, Statistical Analysis
In Progress: Apache Airflow, dbt, Great Expectations, Scikit-learn (ML), Google BigQuery

CERTIFICATIONS

- Tableau Data Analyst — Tableau
- Python for Data Science
- SQL (Intermediate) — HackerRank
- DataCamp Associate Data Engineer
- Data Analysis Using Excel — Mentor To Job Bootcamp
- Data Analysis Using Tableau — Mentor To Job Bootcamp
- Google Data Analytics Professional Certificate — In Progress (Google / Coursera)
